ILLUMINATION

Chandelier

The newly developed chandelier impresses with its durable firmness. While being made of high-alloyed steel, our chandelier still only reaches a total weight of 4.3kg.

Another benefit is the disassembly convenience. Easy folding mechanisms give way to saved time when compared to most of the existing systems.

Our Chandeliers are available in two versions:

1. Big (7 light bulbs)
2. Medium (6 light bulbs)

Framed lamps

With our framed lamps we present you another innovative approach to illumination. That lamp is also made of high-alloyed steel and in combination with its structure, these lighting systems provide you with the following advantages compared to other lamps on the market:

1. The light bulbs are protected against scratches and hits, therefore last much longer
2. The lamps can be stapled, which allows one to store and transport them in a space-saving way
3. Framed lamps can be used for illumination in two different ways: hanging from the roof or standing on a surface
4. The new and innovative design differentiates itself from the traditional lighting systems of the tent business and enables your company to make profit from the innovative appearance

All our lamps, be it our Chandeliers or our framed lamps, give a first-class impression on the basis of the applied materials.
